

Arduino MC60(E) GSM/GPRS/GNSS/BLE Shield

The Arduino MC60(E) GSM/GPRS/GNSS/BLE Shield is a helpful tool for those advanced hobbyists and professionals, who want to get familiar with GSM/GPRS/GNSS/BLE data/voice communication using their Arduino board. With a powerful MC60(E) module from Quectel users are able to use this shield in many different applications. Please read the MC60(E) Hardware design and MC60 AT Command Set documentation first. MC60E documentation download <http://www.quectel.com/qdownload/mc60.html>

1. Hardware Requirements:

- valid micro SIM card
- Arduino UNO (ATMega 328P), Mega (Atmega2560) or compatible board

2. Technical requirements

- Operating voltage range: 6-12VDC
- Operating current: up to 2A DC during transmission bursts, make sure your power supply is sufficient for powering GSM module during these bursts

3. GSM/GPRS/GNSS/BLE module:

- MC60 QUECTEL documentation:
<http://www.quectel.com/qdownload/mc60.html>
- RF connector – SMA female, telematic antenna is part of delivery, any GSM antenna with SMA connector can be used

4. Arduino MC60(E) Shield description

- LEDs: Red LED – Network Light

permanently OFF	MC60 module is OFF
64 ms ON / 800 ms OFF	MC60 is not logged in the network
64 ms ON / 2000 ms OFF	MC60 is logged in the network
64 ms ON / 600 ms OFF	Ongoing GPRS data transfer

- Green LED: Shield Powered
- Yellow LED: 1PPS (1 Pulse Per Second)

5. Connectors on MC60 Shield:

Conn J1 (POWER)	Signal
PIN1	No connection
PIN2	No connection
PIN3	5VDC from Arduino board
PIN4	GND
PIN5	GND
PIN6	VIN – 6-12VDC from external power source

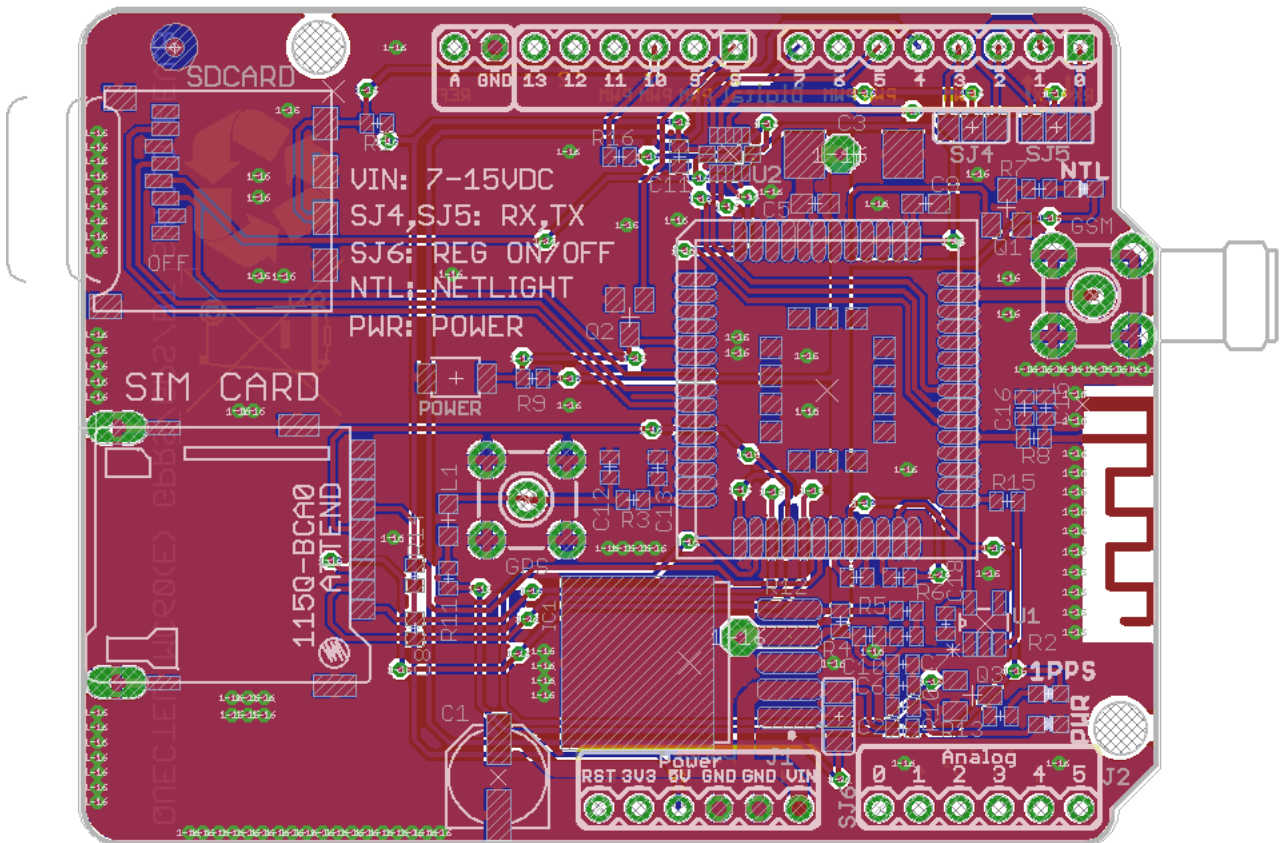

Conn J2 (ANALOG)	Signal
PIN1	No connection
PIN2	No connection
PIN3	No connection
PIN4	No connection
PIN5	No connection
PIN6	No connection

Conn J3 (Digital8_13)	Signal
PIN1	PWRKEY (default)
PIN2	No connection
PIN3	GSMON (must be HIGH to enable communication with MC60)
PIN4	No connection
PIN5	No connection
PIN6	No connection
PIN7	GND
PIN8	No connection

Conn J4 (Digital0_7)	Signal
PIN1	D0_RX (Arduino ---> MC60 Shield) default

PIN2	D1_TX (MC60 Shield ---> Arduino) default
PIN3	D2 (Alternative SW RX)
PIN4	D3 (Alternative SW TX)
PIN5	DETECT (uSD card presence detection)
PIN6	RI (Ring Indicator)
PIN7	No connection
PIN8	ENABLE (Could be used to switch VREG input ON/OFF)
