TE Connectivity is pleased to announce that our 3522 series resistor is now AEC-Q200 qualified. This low cost high power device, suitable for auto placement in volume and for most applications, including high frequency operations, owing to the short lead structure is supplied as standard on 7 inch Reels of 2000 pieces per reel.

Characteristics – Electrical

Power rating at 70°C	3W
Rated current (Jumper)	2.5A
Max. overload current (Jumper)	10A
Max working voltage	250V
Max overload voltage	500V
Dielectric withstand voltage	500V

* Rated continuous working voltage (RCWV) shall be determined from

$RCWV = \sqrt{\text{Rated Power} \times \text{Resistance Value}}$, or Maximum RCWV listed above, whichever is less

**Recommended Circuit Board Design - If this device is anticipated to run at full continuous power then action to improve the cooling should be taken. This can be a metal substrate, copper pad left under the chip, an opening in the PCB or enlarged silver conductor pads each end.

Power derating curve

For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with this curve.
